OmniRoute + Claude Code: Setup Commands

Windows and Mac commands from the video. Copy and paste each block into the VS Code terminal.

1. Install Node.js (Windows and Mac)

Download the installer from nodejs.org, run it, then check the version:

```
node -v
```

2. Install OmniRoute (Windows and Mac)

Run in the VS Code terminal:

```
npm install -g omniroute
```

3. Launch OmniRoute (Windows and Mac)

```
omniroute
```

Dashboard opens at: http://localhost:20128/dashboard

> Use lowercase **omniroute** (Mac is case-sensitive). Relaunch it every time you restart VS Code. OmniRoute must be running before you use Claude Code.

4. Install Claude Code

Windows (PowerShell):

```
irm https://claude.ai/install.ps1 | iex
```

Mac (Terminal):

```
curl -fsSL https://claude.ai/install.sh | bash
```

5. Fix "claude is not recognized" (PATH)

Windows: add this folder to your PATH (Edit environment variables, Path, Edit, New), then restart VS Code:

```
C:\Users\<YourUsername>\.local\bin
```

Mac:

```
echo 'export PATH="$HOME/.local/bin:$PATH"' >> ~/.zshrc
source ~/.zshrc
```

6. Connect Claude Code to OmniRoute

Replace YOUR_COMBO_NAME (no spaces) and YOUR_OMNIROUTE_API_KEY with your own values.

Windows (PowerShell):

```
$env:ANTHROPIC_BASE_URL = "http://localhost:20128"
$env:ANTHROPIC_AUTH_TOKEN = "YOUR_OMNIROUTE_API_KEY"
$env:ANTHROPIC_MODEL = "YOUR_COMBO_NAME"
claude
```

Mac (Terminal):

```
export ANTHROPIC_BASE_URL="http://localhost:20128"
export ANTHROPIC_AUTH_TOKEN="YOUR_OMNIROUTE_API_KEY"
export ANTHROPIC_MODEL="YOUR_COMBO_NAME"
claude
```

Run **claude** in the same terminal window where you set these variables. If you open a new terminal, set them again. Do not add /v1 to ANTHROPIC_BASE_URL. Windows CMD users: use **set ANTHROPIC_BASE_URL=http://localhost:20128** (no quotes).

Heads up

Free providers can go down or hit their quota at any time. After connecting each provider, use the test model button. Never share your API keys publicly or on screen.
